ADDPCP Toolkit Questionnaire

Participant demographic information

Survey respondent: Medical staff

Patient

Preferred language: English

Level of education: Elementary school (grades 1-5)

Informant

Preferred language: _____

Relationship to patient: _____

History of Present Illness summary

Chief complaint	Noticing forgetfulness. Misplacing things. Lost credit card three times. Forgot about a close friend's birthday party recently and didn't go, and that's what prompted the concern. Not missing appointments, Using notes more to keep track of things. Also asking the same questions over and over again, sometimes after an hour or two.
Duration and early symptoms	Been going on for about two years.
Clarification	Provided examples above
Evolution - changes in symptoms	No answer provided for "evolution - changes in symptoms"
Evolution - new symptoms	No answer provided for "evolution - new symptoms"
Non-neurodegenerative cause	Fell a year ago and went to the ED. Started before that, seems to be worse after that.

Respondent endorsed the following symptoms:

Memory

Expressing words, understanding words, or conversations

Getting lost while walking or driving

Seeing things properly or judging distances properly

Changes in mood

Loss of motivation or energy to do things they used to enjoy

Beliefs that are unusual or not realistic

Seeing or hearing things that might not be there (or others can't see or hear).

Sleep

More open to scams or solicitations

Involuntary shaking of hands, arms, legs or chin

Limbs feel rigid or stiff

Changes in ability to walk

Falls

Family members with mental health problems, dementia, Alzheimer's disease, Parkinson's, schizophrenia, bipolar, depression, or other neurological problems.

Additional comments provided by respondent to the following symptoms:

MEMORY

As discussed in HPI

LANGUAGE

Forgets peoples' names more that they used to. Eventually come. back to them. It's embarrassing, but speech and language are otherwise fine. No trouble with comprehension

VISUAL-SPATIAL

Getting lost

Have gotten confused on the way to the doctors' office a couple of times. Made a couple of wrong turns and was late. Using GPS more now.

Properly seeing or judging distances

Seeing weird shapes in things. For instance, saw a lion's head in a tree recently. Also, sometimes looks at the wall and sees moving patterns. Occasionally thinks there is something going by the corner of her eye, and then she looks and there is nothing there

EXECUTIVE

BEHAVIOR

Depression

Has started

Apathy

Used to like to play golf. Not going any more. No good reason. Says it's too far, has to get up too early.

Delusions

Had a hospitalization last year for hip fracture. After that, thought Nazis were coming to the house to interrogate them. Resolved after a few weeks.

Hallucinations

Funny shapes described above. Also, when they were talking about the Nazis, thought they saw Nazi soldiers walking through the house.

Sleep

Yelling and screaming in sleep twice a week. Been going on for six months.

Judgement

Sent money to someone who said they had our financial information. Only happened once. Realized it was a bad idea.

MOVEMENT

Tremors

mild shaking in the hands

Rigidity

Body won't move questions. Not every day. Some days has a lot of stiffness and it's hard to move.

Walking difficulties

Feeling more off balance. Had three falls in the last six months

Falls

3 falls in the last six months

FAMILY HISTORY

Mother had dementia. Started around age 70. Mostly memory problems

ADLs

Symptoms endorsed without additional comments:

Respondent endorsed the following red flags:

Seeing things properly or judging distances properly

Problems with beliefs that are unusual or not realistic
